

Product Care and Cleaning Guide

KCI products are high quality, professional wood finishes that are designed to provide both beauty and function for many years of continual use. These finishes are specifically formulated to meet stringent industry performance standards, as well as current North American health, safety and environmental standards. The following are the guidelines and recommendations to keep furniture / cabinets beautiful for years to come.

1. Do not allow water, chemicals (detergents, vinegar, ammonia etc.) or food spills to set on the finished surface. Always wipe up spills as soon as possible so they do not damage the surface of the coating. Always dry the surface thoroughly when cleaning.
2. For food spots / water spots use a soft cloth to wipe the surface. Do not use coarse or abrasive cloths as they may dull or scratch the surface. Never use soap pads, nylon or scouring pads of any kind.
3. If further cleaning is required, clean surface with water and a small amount of mild soap that does not contain ammonia or abrasives. Never use harsh cleaning solvents such as mineral spirits, paint thinner or alcohol.
4. For greasy / oily spots, as well as waxy spots like lipstick and crayons, use an environmentally approved / non-ammoniated natural cleaner such as Green Works.
5. Do not wax or polish the finished surface. Wax build-up may leave a residue that is hard to remove. Most polishes contain silicones that will contaminate the finished surface.

Follow these simple steps and your furniture / cabinets will stay beautiful for years to come.
